I am v. concerned at the idea of fracking in WA. WA is home to so many highly endangered flora and fauna, most of which cannot be found anywhere else in the world. Fracking is an unacceptable risk to the land and water sources making up their habitat. It is also a risk to our drinking and ground water supplies, which is a precious commodity to both us and farmers - severe drought caused ~~so~~ farmers to commit suicide due to losses, imagine if their land + water were contaminated?

(I - DMP (2015) Guide to Reg. Framework for Shale + Tight Gas in WA)
