To whom it may concern,

I'm writing to register my support for the Burru Energy mine work currently being conducted in the West Kimberley including the Fracking process to access fuel reserves.

I have been to many of the Burru presentations on the subject and attended and discussed the processes with the Department of Environment & Mines and Petroleum here in Derby and Broome. I also have subjected myself to the rants from the Environmental groups and have had open discussions with them on social media discussing some of their, let's just say fairy tail claims. I'm not saying all their information and statements are wrong but there has been some instances where some of their public photos and accusations are down right laughable and false, which leads to my suspicion on what message and motive they're trying to prove.

Burru, Dept of Environment and the Dept of Mines and Petroleum on the other hand out scientific and researched based statistics which are far more credible and represent both sides of the professional argument.

There is obvious economical benefits for the region which is desperately needed and a local supply of oil and gas which is never a bad thing.

Please see my submission and file it under YES for Burru Energys Fracking Program.

Regards

Darren Cross
