**Subject: Fracking enquiry.**

To whom it may concern.

I wish to make a submission and request not to open any fracking licenses into Western Australia. In fact not for any part of Australia or offshore unconventional gas mining.

My concerns are with fracking it has a very high probability to certainty of breaching aquifers causing an unstoppable methane bubbling out of waters.

This greatly effects the health and environment where these instances occur. Condamine river is one such example of contaminated waters. Wyoming in USA also has had issues concerning health of residents and quality of water.

Yours sincerely Ronald Martens.
